Editorials

RNA in Biology and Therapeutics
Sunjoo Jeong

In Memoriam: Seung Ki Lee (1944-2022)
Young-Joon Surh, Jung-Weon Lee, Marc Diederich, Byung Woo Han, Hyuk-Jin Cha, and Kyu-Won Kim

Minireviews

RNA in Therapeutics: CRISPR in the Clinic
Dana Carroll

Antisense Oligonucleotide Therapeutics for Cystic Fibrosis: Recent Developments and Perspectives
Young Jin Kim and Adrian R. Krainer

Determinants of Functional MicroRNA Targeting
Hyeonseo Hwang, Hee Ryung Chang, and Daehyun Baek

Circular RNAs in and out of Cells: Therapeutic Usages of Circular RNAs
Mingyu Ju, Dayeon Kim, Geurim Son, and Jinju Han

Development of mRNA Vaccines/Therapeutics and Their Delivery System
Sora Son and Kyuri Lee

3’UTR Diversity: Expanding Repertoire of RNA Alterations in Human mRNAs
Dawon Hong and Sunjoo Jeong

Sequential Polyadenylation to Enable Alternative mRNA 3’ End Formation
Yajing Hao, Ting Cai, Chang Liu, Xuan Zhang, and Xiang-Dong Fu

Journal Club

Deep Learning Approach Based on Transcriptome Profile for Data Driven Drug Discovery
Eun-Ji Kwon and Hyuk-Jin Cha

COVER PICTURE
RNAs form diverse shapes and play multiple functions as central molecules of gene expression. In this special issue on RNA, seven minireviews illustrate how basic concepts and recent RNA biology findings are transformed into new and exciting RNA therapeutics.
