Vol. 46 No. 12 December 31, 2023

Minireviews

Transcription Factor EB-Mediated Lysosomal Function Regulation for Determining Stem Cell Fate under Metabolic Stress
Chang Woo Chae, Young Hyun Jung, and Ho Jae Han ................................................................. 727

Structural Insights and Mechanistic Understanding of Iron-Molybdenum Cofactor Biosynthesis by NifB in Nitrogenase Assembly Process
Wonchull Kang ............................................................................................................................... 736

Journal Club

Beethoven, Infected with Hepatitis B, Inspired the “Beethoven Virus.”
Sun-Kyung Lee, Seung Hyun Kim, and Joohong Ahnn ................................................................. 743

Research Articles

Deup1 Expression Interferes with Multiciliated Differentiation
Miram Shin, Jiyeon Lee, Haeryung Lee, Vijay Kumar, Jaebong Kim, and Soochul Park .................................................. 746

ANKS1A-Deficiency Aberrantly Increases the Entry of the Protein Transport Machinery into the Ependymal Cilia
Haeryung Lee, Jiyeon Lee, Miram Shin, and Soochul Park .................................................................. 757

Novel Anti-Mesothelin Nanobodies and Recombinant Immunotoxins with Pseudomonas Exotoxin Catalytic Domain for Cancer Therapeutics
Minh Quan Nguyen, Do Hyung Kim, Hye Ji Shim, Huynh Kim Khanh Ta, Thi Luong Vu, Thi Kieu Oanh Nguyen, Jung Chae Lim, and Han Choe .............................................................................. 764

COVER PICTURE

Lee et al. (pp. 757-763), show that disruption of ANKS1A promotes the entry of intraflagellar transport trains into cilia, increasing protein transport and forming extracellular vesicles (ECVs). This figure illustrates the abundance of ECVs along the cilia of primary ependymal cells derived from ANKS1A KO mice.
